

Location: Zorabian Farms  
 Period: July 2016 – August 2016

## EGGS UP AND ANTIV FIELD TRIAL REPORT

EGGS UP field trial conducted on breeder farm where there was 4 flocks suffered at a time with VVND. The production drop was around 10% and mortality was under control. All the 3 flocks were given ANTIV and EGGS UP in feed @ 200g / MT of Feed for 4 weeks. After giving ANTIV and & EGGS UP the production started improving day on day and by the end of the 3<sup>rd</sup> week all flocks show normal or standard Hen Day production.

### VVND affected flock - performance after ANTIV and EGGS UP

Week	Flock 60			Flock 61			Flock 62			Remarks
	Age in weeks	Prod %	Mort %	Age in weeks	Prod %	Mort %	Age in weeks	Prod %	Mort %	
Wk 1	62.4	56.27	0.02	49.40	60.9		35.40	64.8	0.09	VVND diagnosed by Elisa and ANTIV and EGGS UP started in the feed
Wk 2	63.4	48.64	0.03	50.40	47.10	0.04	36.40	54.28	0.06	
Wk 3	64.4	49.36	0.03	51.40	52.36	0.03	37.40	48.75	0.11
